                                                                                                                                                            The invention relates to a novel isolated protein complex comprising a RING-SH 3 polypeptide and a polypeptide selected from a Gag protein, a Gag late domain, PI3K, actin, myosin, Hsp60, Hsp70, Hsp90, STAM1, STAM2A, STAM2B, VHS-UIM, a GTPase, an E2 enzyme, tsg101, a cullin, RING-SH, and a clathrin. The novel protein complex has virucide activity and can be used to treat disorders as part of a vaccine. The protein complex and composition are useful for detecting cells infected with a virus, for dentifying agents having antiviral activity, and for treating viral disorders caused by retroviruses, rhabdoviruses, or filoviruses. This polymucleotide represents a DNA sequence relating to a protein comprising the RING-SH complex of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated protein complex comprising a RING-SH 3 polypeptide and another polypeptide, useful for detecting cells infected with a virus, and for treating viral disorders caused by retroviruses, rhabdoviruses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RING-SH 3; Gag protein; Gag late domain; PI3K; actin; myosin; Hsp60; Hsp70; Hsp90; STAM1; STAM2A; STAM2B; VHS-UIM; GTPase; E2 enzyme; tsgcullin; RING-SH; clathrin; virucide; vaccine; antiviral; retrovirus;

                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel isolated disease detection and treatment (MDDT) DNA polynucleotide. The polynucleotide of the invention demonstrates antiarteriosclerotic, antipsoriatic and cytostatic activities and may be useful in a composition for detecting the expression of a disease detection and treatment molecule polynucleotide. The molecules of the invention may be utilised to diagnose or treat conditions, diseases or disorders associated with cell signalling, such as arteriosclerosis, psoriasis and cancer. The current sequence is that of a human MDDT cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ADL22564 standard; cDNA; 6730

The inventior useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the monoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 3223
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid genes from Drosophila and

The Sp140 polypeptides act as gene transcription regulators. They can be used to develop products for use in the diagnosis and treatment of autoimmune diseases such as primary biliary cirrhosis, rheumatoid arthritis, systemic lupus erythematosus, Sjogren's syndrome, scleroderma and multiple sclerosis, viral diseases including those caused by herpes simplex virus, cytomegalovirus, HTV, hepatitis virus, human T-cell leukaemia, particularly acute promyelocytic leukaemia, cancers of the breast, ovary, prostate, bone, liver, pancreas or spleen, sarcomas and

                                                                Ś
                                                                                                                                                                  The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain creation (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed conditions of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal converted in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The colling and polynucleotide sequences have applications in colling sequences. Assets, gene mapping, identification of mutations cand to produce other types of data and products dependent on DNA and conditions are did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at

                                                                                                                                                                                                                                                                       sequences: (I) is useful as hybridisation probes, polymerase chain (reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed concerning of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The CC diagnostice, forensics, gene mapping, identification of mutations (CC diagnostics, forensics, gene mapping, identification of mutations (CC diagnostics, forensics, gene mapping, identification of mutations (CC and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from MIPO at the printed specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sectively of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and and and and are decorated to assess biodiversity.
                                                                                                                                                                                                                                                                             and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; SEQ ID NO 11249; 103pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       31-MAR-2000; 2000US-00540217.

The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with uterine motility such as pregnancy and labour, and menstrual disorders. The polynucleotide sequences of the invention are also useful in gene therapy. AAS28995-AAS29020 represent genomic sequences encoding for novel human uterine motility-association polypeptides. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with uterine motility such as pregnancy and labour, and menstrual disorders. The polynucleotide sequences of the invention are also useful in gene therapy. AAS28995-AAS29020 represent genomic sequences encoding for novel human uterine motility-association polypeptides. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to grevent, treat or ameliorate a medical condition in e.g. humans, mice, CC prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC in diagnosing a pathological condition or susceptibility to a condition. Antibodies to the proteins can also be used in CC alleviating symptoms associated with the disorders and in diagnostic CC immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, CC nervous system disorders e.g. hlzheimer's disease, infections caused by acteria, viruses and fungi and ocular disorders e.g. corneal infection, CC and many other disorders listed in the specification. The polypeptides CC can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before CC respensate tissues and in chemotaxis. The polypeptides can also be used to as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, cc and other nutritional components. The present content, lipid, protein, carbohydrate, vitamins, the invention. Note: The sequence data for this patent did not form part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  05-DEC-2000; 2000US-0251988P.

                                                                                                                                        밁
                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                           The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to CC prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a CC pathological condition. Antibodies to the proteins can also be used in CC alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunoasorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiac nervous system disorders e.g. cardiovascular disorders e.g. cardiac nervous system disorders e.g. cardiovascular disorders e.g. cardiac nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, CC and many other disorders listed in the specification. The polypeptides CC can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before CC regenerate tissues and in chemotaxis. The polypeptides can also be used to an another presentive to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, CC minerals, cofactors and other nutritional components. The present cC minerals, cofactors and cher nutritional components. The present of the invention. Note: The sequence data for this patent did not form part

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides human cDNAs, proteins and related gen DNAs. These can be used in the treatment of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders and inflammation. The present sequences and inflammation of the present sequences are supported to the present sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated nucleic acid r polypeptide is used in condition.

The protein are useful in treating or ameliated and and isolated cald antibody that can bind to the protein are useful in treating, preventing, CC diagnosing and/or prognosing immunodeficiencies, autoimmune disorders, CC allergic reactions and conditions, inflammatory conditions, graft-versus-CC nost disease, blood-related disorders, hyperproliferative disorders, cardiovascular disorders, respiratory disorders, consurological disorders, endocrine disorders, reproductive system CC disorders, infectious diseases, and gastrointestinal disorders. The CC protein of the invention is useful to stimulate neuronal growth and to CC treat, prevent, and/or disgnose neuronal damage which occurs in certain CC neuronal disorders or neuro-degenerative conditions, for stimulating CC keratinocyte growth, to prevent hair loss, to modulate mammalian CC characteristics such as body height, weight, hair color, and to increase crabbhydrate, vitamins, minerals, cofactors or other nutritional CC components. The nucleic acid of the invention can be used in gene CC acids of the invention

The protein and its encoding nucleic acid are useful for diagnosing a pathological condition or susceptibility to a pathological condition in a subject and for preventing, treating or ameliorating a medical condition. The protein, its encoding nucleic acid and an isolated medical condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Page 323-326; 335pp; English.
